Plant Trainer

Instructions:

Instructions:

- 1 Prior to assembling the Plant Trainer and to create the best effect, it is advisable to lay the cane out for a while to allow the cane to relax into its natural shape.
- 2 Push all the Plant Trainer stems firmly together (any stems of a larger diameter fitted at the bottom).
- 3 Take the length of cane, locate the centre and lightly mark the cane.
- 4 Pull the cane through the top single hole until the center of the cane is located within the top hole of the stem.
- 5 Take the cane, and without kinking, pull round to locate the cane on the opposite side and into next hole down the stem.
- 6 Follow the diagram continuing to thread one side of the "Plant Trainer" at a time and avoid letting the cane twist or kink as this will spoil the swirl shapes of the cane.
- 7 When you reach the bottom stem, leave one pair of holes unused for the small 40cm Plant Trainer and 2 pairs of holes on the taller "Plant Trainers" to leave sufficient stem to push into the soil.
- 8 Finally leave approximately 25mm of cane protruding from the bottom holes of the stem and where necessary bend the cane to prevent the cane pulling out where required.
